ALLSIGNAGE

Software & Interface

Why did ALLNET develop its own software?

Demand for simple, affordable yet powerful software has increased significantly in recent years. The expansion of the product portfolio around tablets and signage displays has also laid the foundation for customised customer solutions.

ALLSIGNAGE software enables the individual preparation and design of static and moving content, while also offering all the tools needed to control content centrally or distribute it according to specific criteria.

Unique selling points

- Easy to use thanks to intuitive interface
- Template management and creation of custom templates
- Overlay function for displaying information on all available displays
- YouTube playlist integration
- RTSP camera stream integration
- ALLNET home automation integration
- Monthly cancellation and addition of displays
- Android devices and all devices with a browser can be integrated
- Simple customer satisfaction/rating system integrated
- Offline display via own offline app
- Active customer management in own account
- In-house signage as internal infotainment solution
- Configuration assistant app for Android phones
- No device restrictions
- White label function

Whitelabel

We have integrated a special feature for our resellers that allows the ALLSIGNAGE interface to be adapted to any desired company design.

The platform can also be routed to your own desired domain, allowing you to offer your customers your own signage solutions.customers your own signage solutions.

Offline App

In addition to cloud mode, ALLSIGNAGE also offers the option of manually supplying devices without an internet connection with content. In this case, the content is loaded onto the device via a USB stick and is then permanently available on the device, even after a restart.

The Signage APP – Cross-platform use

ALLSIGNAGE supports all common software platforms, offering a wide range of possible applications.
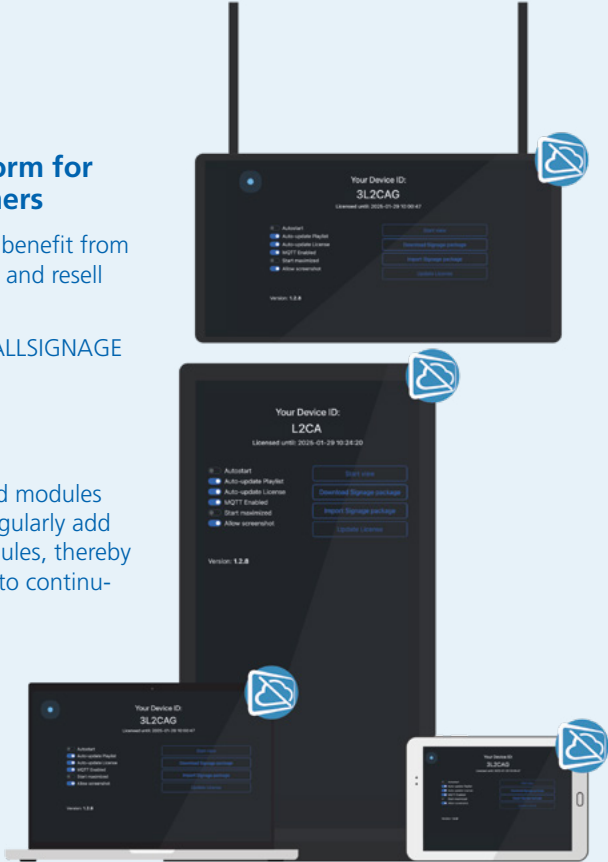

WINDOWS MACOS ANDROID LINUX

Digital advertising platform for resellers and end customers

As an ALLNET customer, you can benefit from favourable purchasing conditions and resell the service to your customers.
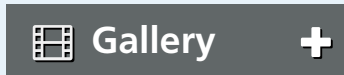

Contact our team to obtain the ALLSIGNAGE reseller conditions.

Free software modules

ALLSIGNAGE provides all included modules free of charge. In addition, we regularly add new add-ons and additional modules, thereby incorporating customer requests to continuously improve functionality.

EXCERPT FROM OUR SIGNAGE MODULES

▦ Gallery ✛

To efficiently integrate multiple images, the gallery module from the available elements in the 'Media' section can be used. This module allows you to select and add multiple images from the media library.
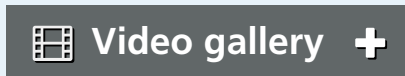

In addition, the display duration of each image can be set individually. Images can be removed again in edit mode by simply clicking on them.

▶ YouTube ✛

Drag this element into the editing window, then the options window will open. Enter the URL of the YouTube video you want to display here. This element always requires an online connection.

PDF ✛

Drag the element into the editing window and select the desired PDF from your media folder. The displayed PDF is scrollable and can therefore also be read via the touchscreen.

▦ Video gallery ✛

The Video Gallery element is used to quickly embed multiple videos that are to be played one after the other. The videos and the playback order can be specified using the selection menu. If desired, the video can also be displayed in full-screen mode.

🎥 RTP Stream ✛

Drag the MJPG Stream element into the editing window, then the options window will open. Enter the URL of the desired stream here. This element always requires an online connection.

OVERVIEW OF ADDITIONAL MODULES AND FEATURES

Image

Drag the Image element into the editing area. The editing window will open. You can then select an image from your media library or directly from a computer.

Video

You can also embed your own videos. These can also be inserted via the editing window.

Static and self-running playlists

The playlists can be designed to be static or dynamic, allowing customers to actively interact with the content or switch to the next slide themselves.

Templates – import and export

Numerous ready-made templates are already available, which can be easily imported into your own playlists.

Slide Tracking & Verification

With the tracking function, each slide is recorded in terms of time and stored in a table. This enables verification and accurate billing based on the individual playing time. This function can be activated directly in the slide overview for each slide.

Reviews

The review function allows you to gather feedback from your customers. This enables you to tailor your content to the wishes of your users.

SEE FOR YOURSELF AND TRY ALLSIGNAGE FOR FREE!

Test two devices free of charge for one month. If you then take out a subscription, you can continue to use these displays free of charge. The software is cloud-based and can only be obtained via signage.allnet.de.

DIGITAL SIGNAGE FOR YOUR BUSINESS

When and where is digital signage used, and what does this term mean?

Digital signage means exactly what it says: digital signage. This term encompasses everything that can be digitally displayed on monitors and displays to show media content.

Digital signage has a wide range of uses and has been an integral part of our environment for years, to the point where it is now impossible to imagine life without it. Traditional advertising spaces such as advertising columns and billboards in city centres and car parks are being replaced by large digital LED screens or panels.

Why?

The advantage of these digital media is obvious. Media content can be sent centrally to these devices from anywhere in the world, and the content is more versatile and can be changed quickly. Videos and interactive content can also be displayed in this way to appeal to many customers at the same time. There is no need to hire companies for poster advertising, etc., and the usefulness of advertising space increases many times over.

Digital signage software includes the ability to import multimedia content such as videos, images or interactive applications and websites, as well as to control and change them over time. To enable display devices to be assigned to different customers and content, they are grouped together and the resolution of the displays and the format are also specified. The customised playlists are then assigned to this group and provided with content. A playlist can consist of one or more slides, which can be filled with different content and played at different times.

ALLNET ALL-S905X4S

**ALLNET Digital Signage
Android 11 Pro Mediaplayer**

Art. No. 211584

- **Cost-effective Android player for external displays & TVs**
